

CANOPY LIGHTING

Bask in the glow of a lower energy bill

Reduce your energy consumption and maintenance costs by switching to long-lasting, high-efficiency canopy lights.

CANOPY LIGHTING

Rebate acquired: Through EnergySmart Grocer

An EnergySmart Grocer representative will provide you with a customized Energy Savings Report and determine rebate information for your store.

Did you know?

You can dramatically reduce your energy consumption and maintenance costs by switching to long-lasting, high-efficiency canopy lights. LEDs, induction, and reduced wattage HID lamps are all alternative options that will produce substantial energy savings over standard HID. This directly impacts your bottom line. In addition to monthly savings, you'll see a quick return on your investment with rebates from EnergySmart Grocer.

Benefits of LED canopy lights:

- **Energy savings**—reduce energy consumption by up to 70 percent compared to standard 400w HID lamps.
- **Lower maintenance costs**—LED fixtures can last up to 11 years before replacing.
- **Control**—a variety of controls, including photo sensors and dimming controllers, can be added to most fixtures for additional savings.
- **Reduce Glare**—highly directional LED lamps lessen glare under the canopy.

Benefits of induction canopy lights:

- **Energy savings**—reduce energy consumption by up to 66 percent compared to standard 400w HID lamps.
- **Lower maintenance costs**—offers the longest life relative to other technologies, lasting up to 14 years.
- **Flexible operating temperature**—operates in a range from -30° F to upwards of 100° F without significant loss in light output and lamp life.

Benefits of electronic HID canopy lights:

- **Energy savings**—reduce energy consumption by up to 41 percent compared to standard 400w HID lamps.
- **Controls**—the programmable electronic ballast allows for dimming down to 50 percent.
- **Low initial cost**—cost of lamp and ballast retrofit is low relative to other technologies; does not require fixture replacement.
- **Increased life of HID**—HID lamps operated by electronic ballasts have 50 percent longer life than those operated by magnetic ballasts.

Benefits of reduced wattage HID canopy lights:

- **Energy savings**—reduce energy consumption by up to 37 percent compared to standard 400w HID lamps.
- **Low initial cost**—lowest upfront investment of the canopy technologies.

Terms and conditions apply. Rebates subject to change.
